Savin Juniper.

A black and white photograph of a large, mature evergreen tree, possibly a spruce or fir, standing against a plain, light-colored background. The tree is conical in shape, with dense, dark foliage covering its branches. The top of the tree is pointed, and a single, thin, vertical branch extends from the apex. The lighting is even, highlighting the texture of the needles and the overall form of the tree.

Concolor Fir.

A black and white photograph of a large, dense, conical evergreen tree, likely a spruce or fir, standing against a light background. The tree has a thick, textured canopy of needles and a visible central leader. It appears to be a mature specimen, possibly a Christmas tree, shown in its natural form.

Make Your Garden a Beauty Spot

Ferris' Glorious

A home is positively a "back number" these days if there is no perennial garden to brighten up the landscape. Perennials are the hardy flowers that come back year after year without replanting. Edging shrubbery or evergreen groups, they give a splendid finish, while in borders or gardens by themselves they are enchanting. These are extra hardy, popular sorts we are listing—varieties that everyone should have. Plant in ordinary garden soil, and as a rule the crowns should be on a level with the ground. They should get shallow cultivation and moisture when needed. For other directions and other varieties, see our large catalog, also general price list on pages 13-15.
